ABSTRACT

Over ninety citations comprise this bibliographic survey on beginning college geography textbooks intended as: 1) a book selection and reference tool for librarians and teachers, 2) a bibliography for curriculum development for teachers and administrators planning and organizing new geography courses; 3) a reference for teachers searching for geographic principles and new approaches; and, 4) a record of textbooks according to major course emphasis. The textbook sections are organized systematically by topic and by geographic area. Part one lists general types of textbooks, and part two enumerates specialized types of textbooks. Complete author entries are provided with separate listings in chronological order by author for cross reference. Additional features include a list of supplementary textbook materials comprising available study guides, workbooks, and general atlases; a listing of books reviewed in "The Journal of Geography" and/or The Professional Geographer by volume and date; and a publishers list with addresses. INTRODUCTION

Following a lull (1959-1960) in publication of introductory college geography textbooks, no less than thirty-two texts including twenty-five entirely new publications have appeared since 1960.[1] The same number appeared in the previous ten years (1951-1960), but this included only fourteen completely new editions. Only two dozen such books were published from 1940 through 1950, and just seven could be considered first editions. Thus, in the last five years more than half of the newly authored introductory geography textbooks published since 1940 have appeared.[2]

Introductory college textbooks frequently become basic references in their fields for many teachers and teachers-to-be, especially in primary and secondary schools. Geography teachers who are non-geographers, including some instructors at the junior college level, probably read little from philosophical and methodological studies by geographers.[3] New textbooks continue to appear and old textbooks are often revised so that relatively new ideas are available on a student level. Some of the survey textbooks develop well the discussion of principles of geography.

The purposes of presenting a topical bibliography of introductory college geography textbooks published during the past quarter century are several:

1. At the college level
   a. To assist busy teachers--especially part-time instructors and non-geographers--in comparing textbooks and selecting them for courses.
   b. To assist teachers and administrators--especially in small colleges (liberal arts, community, or junior colleges)--to plan and to introduce a geography course with a better idea of what to expect for student use.

---

[1]The thirty-two texts include seven classified as economic geography but do not include others published as specialized, i.e. political geography or Anglo-America.

[2]Several popular textbooks have been revised from one to four times during this same period.

[3]All teachers and future teachers of geography should be familiar with some of the recent summary statements about geography. The following writings speak to the geography teacher and provide useful bibliographical references to other specialized statements: Preston E. James (ed.), New Viewpoints in Geography (Twenty-Ninth Yearbook of the National Council for the Social Studies), Washington, 1959; Wilhelmina Hill (ed.), Curriculum Guide for Geographic Education (Geographic Education Series No. 3), Normal, Illinois, National Council for Geographic Education, 1964; Preston E. James, "Geography," in The Social Studies and the Social Sciences (sponsored by the American Council for Learned Societies and the National Council for the Social Studies), New York, Harcourt, Brace and World, 1962, pp. 42-87; Geography in Undergraduate Liberal Education (A Report of the Geography in Liberal Education Project), Washington, Association of American Geographers, 1965; Neville V. Scarfe, Geography in School (Geographic Education Series No. 5), Normal, Illinois, National Council for Geographic Education, 1965.

2. At the primary and secondary level

   a. To provide teachers with an updated list of textbooks which may assist them in their course planning and preparation.

   b. To indicate to secondary teachers and administrators the type of materials which have been and are being presented in introductory college geography courses.

3. To assist librarians in recognizing the various types of textbooks useful to persons seeking a survey of geography.

4. To provide a systematic record of textbooks according to major course emphases.

Despite inherent weaknesses, many geography textbooks have presented well the synthesis of principles and important facts in the field. Some have pioneered new approaches toward the organization of introductory college courses. Some have become old "stand-bys" or "classics" in the field. It would be valuable if students and teachers could examine critically several types of course textbooks, both past and current. For the school teacher whose college preparation in geography may have been "in the distant past", reference to several recent textbooks may help to clarify changing approaches and emphases as witness the increased interest in world culture regions or the rise in quantitative measurements of earth phenomena.

ORGANIZATION OF THE BIBLIOGRAPHY

As indicated in the Directory of College Geography,[1] the approaches to introductory college geography are numerous including courses entitled "Introductory Geography", "Principles of Geography", "Elements of Geography", "Human Geography", "Physical Geography", "World Geography", or "World Regional Geography". Often college students get their first and only geography in an apparently more specialized course such as "Economic Geography", "Political Geography", or "Geography of Anglo-America". These selected course titles imply both systematic (topical) organization and regional organization. While it is generally agreed by geographers that neither approach can exist without the other, some teachers or some departments may favor a particular organizational emphasis for their course in introduction to college geography.

The bibliography is organized topically as follows to show the variety of textbook emphases:

GENERAL INTRODUCTORY TEXTBOOKS (SYSTEMATIC AND REGIONAL)

All introductory textbooks--including a few entitled "Economic Geography"--which examine at length fundamental aspects of physical and human geography are listed in alphabetical order by author. The alphabetical list includes the full title, the abbreviated name of publisher, and the date of each separate edition. Topical listings are given chronologically by author name only; complete reference can be obtained from the alphabetical listing. Because major parts of some textbooks are often used separately in a course--e.g. physical, cultural, or world regional--these are included in the respective topical bibliography.

SPECIALIZED TEXTBOOKS USED FOR AN INTRODUCTION TO GEOGRAPHY

Apart from the previously mentioned introductory textbooks, at least three specialized types are used frequently in first courses in college geography: economic geography, political geography, and the geography of Anglo-America. Most textbooks in these areas of study are also used for advanced courses, many of which require a prerequisite in geography or junior standing. Among the economic geography texts available today, the approaches range from those which emphasize a world survey of commodity production to those which dwell heavily upon methods and principles. The study of political geography, while possibly being a student's only exposure to geography, is often available only to upper division students. The geography of Anglo-America is very frequently taught on a sophomore level and in junior colleges.

ECONOMIC GEOGRAPHY TEXTBOOKS

In economic geography, the emphasis upon occupational types and commodity production is strong, the majority of textbooks being organized around one of these themes or some combination of the two. No textbook since that by Whitbeck and Finch (1941) has been organized by major world regions. However, while the emphases vary, no approaches are mutually exclusive. In the last few years, greater emphasis has been placed upon the geographical aspects of a modern urban-industrial economy in contrast to the well-developed theme of agricultural production and its climatic-vegetational relationships. Finally, economic geography textbooks differ considerably in their depth of analysis so that some are less suitable than others for freshmen-oriented introductory courses. A few of these textbooks were previously listed with general introductory geography textbooks.

POLITICAL GEOGRAPHY TEXTBOOKS

Political geography is seldom taught as a lower division course even in the several colleges in which the course can be taken without prerequisite.[1] However, because political geography may be the only systematic geography course which some students will ever take, the textbooks are included in this bibliography. Textbook organization varies from the topical to the world regional, and in some cases includes a mixture of both approaches.

GEOGRAPHY OF ANGLO-AMERICA OR U.S. AND CANADA TEXTBOOKS

Many students receive a first and only geography course in one focusing upon the United States and Canada. Among major world regions, Anglo-America is perhaps the most logical to teach first. In any case, such a course is commonly taught without a prerequisite and is offered at a lower division level in a great number of colleges and universities. The availability of up-to-date textbooks is somewhat limited unless one considers also several recent British textbooks which are obtainable from North American distributors. The British books deserve some consideration.

GENERAL ATLASES

A selected bibliography is given for recent editions of general atlases which are useful as supplementary textbook material for students in geography courses. Many of these current atlases, ranging in price from $0.70 to about $9.00, have gone through multiple editions.

Several of the atlases listed are of British origin but are usually available in American editions. For example, atlases edited by John Bartholomew have been published by several companies in both Britain and the United States. Among the atlases prepared in the United States, the best known student atlas is Goode's World Atlas (Rand McNally)--first published in 1923 as Goode's School Atlas and now in its 12th edition. A recent competitor to the Goode's atlas is the Prentice-Hall World Atlas (1958 and 1963). Where cost is a major factor, Hammond's Comparative Atlas ($0.70) has been widely used for about twenty years.

General Atlases: Alphabetical Listing According to Editors and/or Publishers

Bartholomew (John Bartholomew and Son Ltd. at the Geographical Institute, Edinburgh, Scotland)

Founded in 1915, "to promote geographic education and research and to secure cooperation between the various fields of geography in the public schools and colleges," the National Council for Geographic Education has grown into an organization of teachers of geography with members in every state in the United States and in many foreign countries. The distinguished editors of the National Council for Geographic Education have developed The Journal of Geography into the leading publication in the nation for geography teachers. The annual meetings, usually held in the autumn, bring together teachers of geography in the elementary, junior high, and high schools and in the colleges and universities from all regions of the continent in a stimulating and pleasant fellowship. The programs provided at these meetings, together with the articles published in The Journal of Geography, furnish an excellent cross-section of scholarship in geography. Membership in the National Council for Geographic Education is available to all whose field of interest is geography.
